THE PATH TO SUSTAINABLE AI

The Universal Object Reference Foundation | uor.foundation

AI SCALABILITY CHALLENGE

- Every time you use AI, it computes the answer from scratch in a giant centralized data center.
- The more we use it, the more energy it burns and more data it captures.
- The data of billions is extracted to build these AI systems — then rented back to us.

This is not sustainable.

OpenAI's 4.5 GW Stargate data center.

UOR INSIGHT

Imagine every repetitive AI operation or complex compute workload **only needs to be done once**. After that, it's instantly available forever anywhere, on any device, with almost zero energy.

This is possible because it receives a permanent **UOR address based on what it is**, not where it lives. Then performing the AI operation becomes a **lookup, not a computation**.

NEW FOUNDATION FOR SUSTAINABLE AI

- **Runs on your own device**

Heavy AI work happens locally at edge with almost zero energy and no centralized cloud dependency.

- **Anyone can verify it**

Complete trust is no longer required. The results can be checked by anyone, anywhere.

- **Your data stays yours**

Nothing ever leaves your device. True ownership and privacy by design, secured by FHE.

WAKING UP SUSTAINABLE AI WITH UOR.
